

COVID-19 Oral Antivirals & Monoclonal Antibody Update 1-17-22:

- **Supply:** We still have both Paxlovid and molnupiravir in stock. We should receive EVUSHELD this week.
- **EVUSHELD:**
 - A new monoclonal antibody IM injection under EUA for **pre-exposure prophylaxis** in those aged 12+, weighing 40kg+ **and:**
 - Not currently infected with SARS-CoV-2 and have not had a known recent exposure
 - Have moderate-severe immune compromise and may not mount an adequate response to vaccination **or** cannot receive the vaccine due to history of severe adverse reaction to the COVID-19 vaccine and/or vaccine components.
- **Documents that follow:**
 - Order forms for Paxlovid/molnupiravir and EVUSHELD. We created these in hopes of making it easier to send in prescriptions. They include important criteria to consider for each agent.
 - Table with important information on each medication: We added EVUSHELD.
- **Allocation:** We have a very limited supply of Paxlovid. **Please indicate on each Rx what qualifies each patient as NIH tier 1 or 2** (this essentially includes **immunocompromised** patients and **unvaccinated, high-risk** patients *only*).
- **Med Lists:** Due to Paxlovid's drug-interactions, please include a current medication list when this agent is prescribed so that we may appropriately screen and counsel the patient.
- **Patient procedure:** Please ask patients to remain in their car, wear a face mask and call us when they arrive. One of our pharmacists will spend adequate time counseling each patient.

We appreciate your help during these challenging times. Please do not hesitate to reach out to us with any questions or concerns!
